Pick Your Poison Monona Rossol, 2011-02-02 How the chemicals in everyday products are killing us—and what the government is not doing about it Did you know that nontoxic usually means never tested? Or that many green cleaners are good for the environment but terrible for you? Chemist and activist Monona Rossol goes from under your sink to the halls of the powerful, tracing America's love affair with chemicals that kill, explaining how much worse the problem has gotten in the last decade. Shocking and appalling and completely reckless—that's how she describes the current prevalence of harmful chemicals in our everyday lives. Scientists have started linking our increased rates of cancer, autism, obesity, and asthma (among others) to chemical exposure and Rossol points the finger directly at the companies and executives making millions of dollars by polluting our environment and introducing toxic chemicals into our bodies. She chronicles how everyday toxins get into our bodies and accumulate over time and provides us with inspiration to make changes at the checkout lines. She also explains that Americans are not nearly as well protected by our government as we might think we are. Unlike the European Union, the United States allows chemical companies to produce toxins for use in U.S. consumer products with little to no oversight. While her tone is wry and entertaining, she's also well informed, and her fact-filled treatise makes for absolutely terrifying reading. Includes surprising explanations about the chemicals in furniture, detergents, paints, makeup, toys, spray cleaners, ionic air purifiers, art supplies, and more Reveals how many eco-friendly products are good for the environment but bad for your health Exposes the truth about government regulations, product testing, and labeling, including why terms such as nontoxic (which often means never tested), hypoallergenic, and FDA-approved can be misleading Offers practical ways to reduce your exposure and protect yourself and your family If you're alarmed by the

health risks of the many hazardous chemicals we encounter at home, work, and school, don't get frightened, get informed. Read *Pick Your Poison* to learn the facts and find out what you can do about the daily onslaught of toxins that are making lab rats of us all.

Vaccine A Gary Matsumoto,2009-04-29 In this provocative look at the US military from the Persian Gulf War through the 2003 invasion of Iraq, investigative journalist Gary Matsumoto contends that an anthrax vaccine dispensed by the Department of Defense was the cause of Gulf War Syndrome and the origins of a massive cover-up. Matsumoto calls it the worst friendly-fire incident in military history. A skillfully-woven narrative that serves as a warning about this man-made epidemic, Vaccine A is a much needed account of just what went wrong, and why.

Chlorinated Drinking-water, Chlorination By-products IARC Working Group on the Evaluation of Carcinogenic Risks to Humans,1991 Evaluates the carcinogenic risk to humans posed by the consumption of chlorinated drinking-water by two chemicals used in the chlorination of drinking-water by a number of halogenated by-products formed when chlorine interacts with organic matter in water and by a selection of other halogenated compounds found in drinking-water. Chlorination was selected for evaluation because of its widespread use and because potentially carcinogenic by-products have been measured in chlorinated water. The book also includes a separate monograph on cobalt and cobalt compounds. The volume opens with

a discussion of the many methodological problems that complicate efforts to assess the carcinogenicity of chlorinated water. Against this background the book evaluates the design and findings of all studies relevant to the carcinogenicity assessment of chlorinated drinking-water two chemicals (sodium chlorite and hypochlorite salts) used in the chlorination of water eight of the by-products most frequently measured in drinking-water and three additional halogenated chemicals detected in drinking-water. Because of the formidable methodological obstacles faced by all investigations only one of these substances could be classified: bromodichloromethane was classified as possibly carcinogenic to humans. The final monograph considers data on metallic cobalt, cobalt alloys including cobalt-containing surgical implants and dental devices and cobalt compounds. In view of the strength of evidence linking cobalt metal powder and cobalt[II] oxide to cancer in experimental animals cobalt and cobalt compounds were classified as possibly carcinogenic to humans.
