web jan 1 2021 real time pattern of stress concentration in 3d model of crane hook is obtained the stress distribution pattern is verified for its correctness on an acrylic model of crane hook using
stress analysis of crane hook with

different cross section using - Jul 24 2022

web stress on crane hook depends upon various geometric variables as well as material properties in this analysis the material properties of hook kept constant throughout the analysis and stress is to be reduced by varying different geometric parameters
design and strength analysis of a crane hook - Jun 03 2023

web jan 10 2022 the most stressed part of the crane hook is the curved inner surface this surface is considered critical in terms of strength the goal of this paper is to select a suitable crane hook

analysing crane hook of different cross sections and springer - Jan 30 2023

web analysis of these hooks to determine the areas with high stress i.e failure points and those with low stresses these are potential points for material removal weight reduction and reduced costs

finite element stress analysis of crane hook - Sep 25 2022

web bending stresses combined with tensile stresses weakening of hook due to wear plastic deformation due to

overloading and excessive thermal stresses are some of the other reasons for failure hence continuous use of crane hooks may increase the

magnitude of these stresses and eventually result in failure of the hook
