Defensas ribereñas con gaviones y geosintéticos Gerardo Fracassi, 2019-03-01 Los revestimientos, muros de contención, diques longitudinales y espigones son apenas algunas de las soluciones para la estabilización, regularización, protección contra la erosión y control de las crecidas en cursos de agua. Defensas ribereñas con gaviones y geosintéticos explica las características de estas obras, los problemas que pueden ser solucionados con ellas y la forma de dimensionarlas. La obra aborda desde la morfología fluvial y los tipos de intervención en un curso de agua hasta la Bioingeniería y los métodos de dimensionamiento. Presenta sugerencias para proyectos de estructuras en gaviones y muestra diversos casos reales en que explica detalladamente los problemas encontrados y las soluciones aplicadas, con ilustraciones paso a paso. Es una valiosa referencia para profesionales involucrados en obras de protección y estabilización de márgenes, control del trazado del río y protección contra inundaciones. Esta es la primera publicación de la Colección Maccaferri con soluciones de ingeniería para obras hidráulicas.

Los procesos de erosión costera Hugo Donini, 2021-09-07 El presente texto desarrolla los principales conceptos para la comprensión de los procesos del transporte de sedimentos, y en particular, de aquellos que generan erosión en las costas de las playas. Se inicia con el tratamiento de los contenidos básicos relacionados con las cartas marinas, los estudios que relevan el mar, las mareas astronómicas, las olas y los sedimentos, de forma de que el lector cuente con una introducción a dichos temas. Para los capítulos se han empleado fotografías, imágenes satelitales, estudios de evolución costera y la experiencia actual existente para mitigar la erosión y proteger nuestras costas. El resultado es un texto que puede ser abordado por cualquier lector interesado en los espacios litorales. Sus diez capítulos han sido ilustrados con doscientas ochenta figuras e imágenes y los conceptos complementados con más de cuarenta ejemplos numéricos. Es el deseo que este libro sea una contribución y un objeto de consulta para aquellos a los que interesa el litoral marítimo.

Diseño de concreto reforzado Jack C. McCormac, Russell H. Brown, 2017-07-20 El concreto es una mezcla de arena,

grava, roca triturada, entre otros materiales, que se encuentran unidos en una masa rocosa por medio de una pasta de cemento y agua. Sin embargo, a pesar de que este material tenga una alta resistencia a la compresión, no pasa lo mismo con su resistencia a la tensión. A partir de esto, encontramos la importancia del concreto reforzado, ya que éste, gracias al refuerzo de acero del cual está hecho, posee una alta resistencia a la tensión. El acero de refuerzo es también capaz de resistir fuerzas de compresión y se usa en columnas, así como en otros miembros estructurales.

La energía que viene del mar Fernanda Miguélez Pose, 2009-05 En este libro se presenta una visión general sobre el modelo y las necesidades de abastecimiento energético, la situación mundial y la necesidad de cambios, para profundizar en las alternativas que nos presenta el mar para diversificar y optimizar nuestras fuentes de ENERGÍA. Si pensamos que la energía es solo gas, petróleo y carbón nos estamos equivocando. La energía principal para la humanidad es el alimento. Por eso debemos ver el mar no solo como una fuente de energía mecánica para transformarla en energía eléctrica, sino también como una fuente importantísima de biomasa utilizable como generador de combustible y sobre todo como productora de una

energía imprescindible: la alimentación humana. Por eso que conviven en este libro, los generadores que convierten en electricidad la tremenda energía del mar con el cultivo marino de microalgas para captura de CO2 y su transformación en biocombustible o celulosa, y proyectos como el peixe verde, todos ellos destinados a obtener la mayor cantidad de energía (con mayúsculas) del mar, invirtiendo la menor cantidad de esta, es decir, siendo mas EFICIENTES. Pero el mar no solo nos da energía “positiva”. Debemos estar al tanto de los problemas asociados al cambio climático y sus consecuencias: aumento del nivel del mar, olas mas altas, movimientos mas agresivos e invasión de terrenos, y también de los cambios locales en las condiciones de las corrientes, temperaturas, etc por todo lo que ello puede implicar de cambios en la flora y fauna de las zonas marinas, y la repercusión que sobre sectores productivos y alimentarios puede llegar a tener. El libro propone distintos campos en la reflexión de un debate energético mas abierto ahora que nunca sobre este tema que puede parecer de dominio público, pero que en realidad es el gran desconocido: LA ENERGÍA.
