Rénovation énergétique durable des maisons individuelles Catherine Charlot-Valdieu,Philippe

Outrequin,2024-12-04 Se lancer dans une rénovation énergétique performante nécessite toujours un plan d'actions (parfois par étapes) et surtout des interlocuteurs qualifiés (architectes, bureaux d'études, artisans...). Elle doit s'organiser en tenant compte : du diagnostic bioclimatique de la maison (orientation, spécifications du bâti, modénature, contraintes géographiques et climatiques...), des problématiques techniques de l'enveloppe et, in fine, des attentes et objectifs du ménage (extension, plus-value patrimoniale, confort d'usage, confort d'été...). La première partie de cet ouvrage rappelle le cadre législatif français et précise les objectifs de rénovation énergétique des logements qui en découlent. La deuxième partie traite des différentes problématiques techniques dont il faut avoir conscience avant de démarrer tout projet. Cela concerne le traitement des façades, des menuiseries, de la toiture, des planchers, des systèmes de chauffage et de rafraîchissement, du renouvellement d'air mais aussi de la gestion des interfaces, essentielle pour assurer la performance et la durabilité du bâtiment (continuité de l'enveloppe, étanchéité à l'air, ponts thermiques, gestion de la vapeur d'eau). Un chapitre est également consacré au confort d'été. Enfin, les dernières parties de l'ouvrage présentent 27 rénovations exemplaires. Trois périodes ont été distinguées, chacune présentant des caractéristiques de construction très différentes : le bâti ancien construit avant 1914 privilégiant la pierre et les matériaux locaux, le bâti construit entre les deux guerres et durant les Trente Glorieuses (entre 1919 et 1974, première réglementation thermique) et les bâtiments construits entre 1975 et 2000 avec une première isolation et une ventilation mécanique. Illustré par de nombreux schémas de détail, plans, coupes et des photos en couleurs, cet ouvrage présente pour chaque réalisation : une analyse détaillée du contexte et du projet architectural, les options techniques retenues, une description des caractéristiques de l'enveloppe et des équipements thermiques ainsi qu'un bilan énergétique. Destiné aux architectes, aux maîtres d'oeuvre et aux maîtres d'ouvrage (propriétaires), cet ouvrage a pour vocation d'accompagner tous les acteurs d'une rénovation énergétique vers un projet performant, durable et garantissant le confort pour ses occupants.

Les certificats d'économies d'énergie Franck Annamayer,Florence Lievyn,2024-09-04 Souvent décriés, parfois ignorés et généralement mal appréhendés, les CEE représentent pourtant depuis 2006 le mécanisme choisi par la France pour justifier de ses économies d'énergie à la Commission européenne. Par ailleurs, avec plus de 5 milliards d'euros par an et une

augmentation significative dans les années à venir, le dispositif des certificats d'économies d'énergie (CEE) représente le principal outil de financement de la rénovation énergétique en France. Ainsi, depuis presque 20 ans, au gré des changements politiques et des évolutions techniques, les CEE poursuivent leur vie, parfois mouvementée, souvent chahutée mais pleine d'opportunités au travers d'une odyssée qui n'est pas près de s'arrêter aux vues des objectifs de neutralité carbone poursuivis par la France d'ici 2050. Cet ouvrage en quatre parties se propose d'expliquer le fonctionnement d'un dispositif qui a permis des succès incontestables en matière d'économies d'énergie. Cependant, il n'en occulte pas moins certaines de ses limites, intrinsèques et extrinsèques, et propose des axes d'amélioration pour lui redonner un nouveau souffle. Cet opus didactique est destiné à toutes les personnes souhaitant comprendre le mécanisme original des certificats d'économies d'énergie.

Études économiques de l'OCDE : Estonie 2015 OECD,2015-09-22 L'Étude économique de l'OCDE pour l'Estonie 2015 examine les récents développements économiques, politiques, et les perspectives et jette un regard plus détaillé sur augmenter la productivité et utiliser au mieux le capital humain.

Rapport sur l'innovation et le changement climatique : l'apport de l'évaluation scientifique et technologique Jean-Yves Le Déaut, office parlementaire d'évaluation des choix scientifiques et technologiques, Bruno Sido, 2015-11-09 La conférence du 24 septembre 2015 a été organisée pour marquer le trentième anniversaire du premier rapport de l'OPECST à l'occasion de la présidence française en 2015 de l'European Parliamentary Technology Assessment (EPTA), le réseau européen des structures chargées de l'évaluation scientifique et technologique auprès des parlements d'Europe. Conçue comme une contribution à la préparation de la COP21 dont elle a reçu le label, cette conférence a rassemblé, au-delà de l'EPTA, plus de deux cents personnalités provenant de trente pays différents, dont vingt-sept parlementaires de pays européens. Elle a notamment permis de discuter des propositions contenues dans un « Livre vert » que l'OPECST et les membres de l'EPTA avaient préparé sur la base de leurs travaux respectifs d'évaluation scientifique et technologique dans quatre domaines clefs pour l'innovation au service de la lutte contre le changement climatique : le bâtiment, l'alimentation, les transports, l'implication des citoyens dans la gestion des technologies intelligentes. Le présent rapport rassemble les actes de cette conférence, les « considérations » adoptées en conclusion par l'EPTA et le « Livre vert » reprenant les évaluations des politiques mises en oeuvre dans les pays membres de l'EPTA.

La Chaleur renouvelable et la rivière Jean Grossmann, 2015-12-23 En ouvrant le débat sur la transition énergétique, la France saura-t-elle décourager les industriels qui calculent déjà les retombées économiques de ces hydrocarbures enfouis dans les roches quitte à passer sous silence les méfaits écologiques de la fracturation hydraulique? Saura-t-elle convaincre les autres gouvernements européens que le problème planétaire de l'énergie aggrave les conséquences du réchauffement climatique? Ce livre sur l'énergie apporte un début de réponse à ces interrogations et des solutions à ces problèmes. La

cohabitation des hommes et des techniques, l'application de quelques règles au niveau européen permettraient d'effectuer à relativement court terme une réelle transition énergétique en rendant vie à quelques-unes de nos rivières. Il y a urgence... Ingénieur mécanicien expérimenté en mécanique des fluides à la recherche de la vérité technique et financière dans le domaine de l'énergie, l'auteur espère faciliter l'émergence d'une prise de conscience des premiers acteurs de la rénovation énergétique des bâtiments: les copropriétaires et leur syndic. Il propose dans cet ouvrage des solutions concrètes et économiques pour le chauffage collectif des immeubles en zone urbaine. Militant d'un parc aquathermique, il démystifie les installations de chauffage thermodynamique produisant de l'énergie thermique renouvelable. Il apporte une réponse graduée sur la façon de procéder par étapes successives lors du remplacement d'une chufferie obsolète et onéreuse à l'usage, par un mode de chauffage performant et économique. Une mine d'informations et de savantes pistes de réflexion pour mieux appréhender l'ère énergétique de demain.
