Administración de operaciones de construcción Alfredo Serpell Bley, 2024-03-06 La ejecución de las obras es la

etapa más relevante de los proyectos de construcción y presenta muchas características que hacen de ella una actividad compleja. Debido a fallas en su dirección o a factores del entorno, muchas construcciones terminan atrasadas, con sobrecostos, problemas de calidad, accidentes, conflictos contractuales, etc. Dirigir una obra es un trabajo desafiante y de alto impacto, que requiere de una gran capacidad de liderazgo y comprensión de todo el proceso, así como de los diversos factores que lo afectan. Siendo los aspectos técnicos muy importantes para la edificación y sustentabilidad, también ha sido ampliamente demostrado que la administración es una palanca esencial para lograr eficiencia y efectividad en la ejecución de las operaciones en función de cumplir de manera óptima con el resultado final esperado. Este libro, en su tercera edición, aporta información muy valiosa, consejos, ideas y recomendaciones para profesionales y estudiantes interesados en el área de la administración de la construcción (construction management). De fácil lectura, recorre los principales temas de la dirección de obras, como son: características productivas; factores de desempeño, tales como productividad y trabajo; métodos para gestionar la calidad; planificación de la obra y dirección de su ejecución; gestión de los recursos productivos; hasta finalizar con la tramitación de los contratos entre las partes.

Planeación, programación y control de obras de construcción Jorge Montoya, 2022-02-10 LA PLANEACIÓN, PROGRAMACIÓN Y CONTROL son las fases necesarias para la materialización de cualquier obra de construcción, bien sea una vía, represa, edificación o un sistema de abastecimiento y evacuación de aguas. Este libro se enfoca en las generalidades de estas tres etapas en la construcción de viviendas y obras de urbanismo. Además, ofrece dos fortalezas: la programación y control de obras con Ms Project y el cálculo de costos por medio de análisis de precios unitarios. Para el primer caso, se explican los métodos más relevantes de programación, en tanto que, para el segundo caso, se da una explicación amplia de los tipos de recursos, cálculo de cantidades de obra, costos directos y costos indirectos. Finalmente, se explican los diferentes papeles que existen en la construcción de obras.

Arquitectura, fenomenología y dialogía social. Architecture, phenomenology & social dialogics Josep Muntañola Thornberg, 2015-05 The phenomenological and social analysis of architecture and planning are not a new subject matter. However a set of new conditions made them interesting again. First the impact of Mikhail Bakhtin's dialogical philosophy. We reproduce here the incredible text of the lecture in Barcelona (June 2013) by Michael Holquist, biographer, translator and the best worldwide expert of Bakhtin's ideas and works. This lecture is a basic text in order to understand not only Bakhtin but also the cultural meaning of architecture as such. Second the tandem work by Steven Holl and Juhani Pallasmaa on the perception of human existential space. See the work by our PHD student Shlomi Almagor in this issue. Third the need for new social phenomenology of architecture and urban planning education. The bases for that are in an article devoted to Lewis Mumford legacy and published in the international review Scienze del territorio (Vol 2) 2014, University of Florence.

The volume includes a selection of communication from the last two international congresses by the architectonics network in Barcelona 2012 and 2013. We cannot publish all of them, but the rest can be read in the web www.arquitectonics.com. (ISBN 978-84-616-2928-2) (ISBN 978-84-695-9424-7)
