[coding style - Using "super" in C++ - Stack Overflow](#) As for chaining super::super, as I mentionned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java (where you can't chain "super"). **'super' object has no attribute '\_\_sklearn\_tags\_\_'** Dec 18, 2024 · 'super' object has no attribute '\_\_sklearn\_tags\_\_'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues between Scikit-learn and XGBoost or Python version. I am using Python 3.12, and both Scikit-learn and XGBoost are installed with their latest versions. **What is a difference between <? super E> and <? extends E>?** Sep 2, 2009 · The first (<? super E>) says that it's "some type which is an ancestor (superclass) of E"; the second (<? extends E>) says that it's "some type which is a subclass of E". (In both cases E itself is okay.) So the constructor uses the ? extends E form so it guarantees that when it fetches values from the collection, they will all be E or some subclass (i.e. it's compatible). The drainTo method ... **How does Python's super () work with multiple inheritance?** In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. **python - replace block within { { super () } } - Stack Overflow** In the child template, I would like to include everything that was in the head block from the base (by calling { { super() } }) and include some additional things, yet at the same time replace the title block within the super call. *'super' object has no attribute '\_\_getattr\_\_' in python3* Mar 5, 2015 · The Python attribute retrieval mechanism works in a way that a class \_\_getattr\_\_ is called as "last resource" to try to get an attribute for an instance of that class. Your code is right - it fails due to your superclass of "Example" - in this case "object" - not having a \_\_getattr\_\_ attribute. If you are not at a deep class hierarchy and want to perform custom attribute retrieval for a ... **super() in Java - Stack Overflow** Sep 22, 2010 · super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. *AttributeError: 'super' object has no attribute* - *Stack Overflow* Jul 9, 2018 · I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: *AttributeError: 'super' object has no attribute* **do\_something class Parent: def \_\_init\_\_(self):...** **Understanding Python super() with \_\_init\_\_() methods** Feb 23, 2009 · super() lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen. **oop - What does**

**'super' do in Python? - Stack Overflow** Nov 3, 2015 · The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ...
