The Comprehensive Handbook of Behavioral Medicine J.M. Ferguson, C. Barr Taylor, 2012-12-06 Many of the greatest strides in medical care have neither been glamorous nor made the front page of The New York Times. They have been simple measures such as sanitation, immunization, and provision of clean, wholesome food. And even more glamorous medical

breakthroughs and techniques like heart transplants are often last-ditch responses to largely preventable medical problems that required a lifetime to develop. Changing those life styles which may cause, worsen, or exacerbate disease and utilizing current medical knowledge may be the most important strides medicine will make in the next few decades. To meet this challenge, techniques have already been developed to change eating and nutritional patterns that may lead to obesity and heart disease. In addition, interventions are being developed for a wide variety of medical problems. Many of these techniques are based on behavioral principles. Several years ago, one of the editors of this book gave a behavioral medicine seminar for psychiatry residents concerning behavioral principles and their application to medicine. As the seminar developed, it became evident that many of the important articles on the subject were scattered through out a wide body of literature, which encompassed a variety of disciplines and journals. No single source was available to provide the state of the art of this emerging field. This book was spawned, in part, as an attempt to overcome this deficit.

Late-Life Depression Steven P. Roose, Harold A. Sackeim, 2004-07-15 We live in an aging world. Illnesses that are prevalent and cause significant morbidity and mortality in older people will consume an increasing share of health care resources. One such illness is depression. This illness has a particularly devastating impact in the elderly because it is often undiagnosed or inadequately treated. Depression not only has a profound impact on quality of life but it is associated with an increased risk of mortality from suicide and vascular disease. In fact for every medical illness studied, e.g. heart disease,

diabetes, cancer, individuals who are depressed have a worse prognosis. Research has illuminated the physiological and behavioral effects of depression that accounts for these poor outcomes. The deleterious relationship between depression and other illnesses has changed the concept of late-life depression from a psychiatric disorder that is diagnosed and treated by a psychiatrist to a common and serious disorder that is the responsibility of all physicians who care for patients over the age of 60. This is the first volume devoted to the epidemiology, phenomenology, psychobiology, treatment and consequences of late-life depression. Although much has been written about depressive disorders, the focus has been primarily on the illness as experienced in younger adults. The effects of aging on the brain, the physiological and behavioral consequences of recurrent depression, and the impact of other diseases common in the elderly, make late-life depression a distinct entity. There is a compelling need for a separate research program, specialized treatments, and a book dedicated to this disorder. This book will be invaluable to psychiatrists, gerontologists, clinical psychologists, social workers, students, trainees, and others who care for individuals over the age of sixty.

Mechanical Circulatory Support: A Companion to Braunwald's Heart Disease Ebook James K Kirklin, Joseph G Rogers, 2019-07-09 Offering comprehensive, authoritative coverage of mechanical circulatory support (MCS), this fully revised companion to Braunwald's Heart Disease provides the clinically relevant information you need to effectively use this therapy to treat and manage end-stage heart failure. Drugs Affecting Lipid Metabolism VIII David Kritchevsky, 2012-12-06 The Proceedings of the Eight International Symposium on Drugs Affecting Lipid Metabolism (8th D.A.L.M.) is the subject of this volume. Since the first symposium in

1960, each successive meeting has broken new ground in the field of pharmacological control of lipid levels - offering new and stimulating insights and exposing the audience to the state of the art. The field has progressed sufficiently to permit discussion of the cellular biology of atherosclerosis. The opening session was devoted to pathology, macrophages, lipoproteins and their receptors and cholesterol ester metabolism. Because of the recent emergence of new apolipoprotein technology, a workshop devoted solely to apolipoprotein methodology was introduced followed by a plenary session devoted to their metabolism and structure. Another rapidly developing area of atherosclerosis research is non-invasive assessment of this condition. Accordingly, a session was devoted to new techniques for this research modality. The final plenary sessions were devoted to the roles of drugs and diet in atherosclerosis - cause, treatment and mechanisms of action. The meeting was summarized by Dr. O.J. Pollak, one of the founding fathers of this field. There were nine sessions of proffered papers whose abstracts appear in this volume. In addition, special workshops (to be reported elsewhere) were devoted to several drugs including Oizanol, Probucol and Etofibrate.
