Climate-Environment Interactions under Global Warming, volume II Hainan Gong, Haipeng Yu, Zhiyuan Hu, Qinjian Jin, 2025-03-07 During recent decades, the global climate and environment have experienced unprecedented changes. Much evidence indicates that the global surface temperature is increasing rapidly, especially in the Arctic, and extreme climate and environmental events are frequently occurring. Climate and environmental changes not only have a great impact on society and the economy but also seriously exert far-reaching impacts on both human lives and health. Therefore, revealing the mechanisms behind the climate and environmental changes is critical to advancing our understanding and predicting of the global climate and environmental changes and their impacts. Climate change can cause environmental change, and environmental change may in turn affect climate change. For example, the faster Arctic warming can change the mid-latitude large-scale atmospheric circulation and further modulate the regional air quality through transport and diffusion. Conversely, the air pollution associated with industrial activities may also affect the regional and global climate through the complicated aerosol-climate interaction. The limited understanding of these feedback and interactions adds uncertainty to predicting the future evolution of the climate and environment.

*Meta-topolin: A Growth Regulator for Plant Biotechnology and Agriculture* Naseem Ahmad, Miroslav Strnad, 2021-05-02 Plant tissue culture (PTC) technology has gained unassailable success for its various commercial and research applications in plant sciences. Plant growth regulators (PGRs) are an essential part of any plant tissue culture intervention for propagation or modification of plants. A wide range of PGRs are available, including aromatic compounds that show cytokinin activities, promote cell division and micro-propagation, viz. kinetin, N6-benzyladenine and topolins. Topolins are naturally occurring

aromatic compounds that have gained popularity as an effective alternative for other frequently used cytokinins in in vitro culture of plants. Among them, meta-topolin [6-(3-hydroxybenzylamino) purine] is the most popular and its use in plant tissue culture has amplified swiftly. During the last few decades, there have been numerous reports highlighting the effectiveness of meta-topolin in micropropagation and alleviation of various physiological disorders, rooting and acclimatization of tissue culture raised plants.

Thidiazuron: From Urea Derivative to Plant Growth Regulator Naseem Ahmad, Mohammad Faisal, 2018-03-23 Plant biotechnology is a most interesting branch for academicians and researchers in recent past. Now days, it becomes a very useful tool in agriculture and medicine and is regarded as a popular area of research especially in biological sciences because it makes an integral use of biochemistry, molecular biology and engineering sciences in order to achieve technological application of cultured tissues, cell and microbes. Plant tissue culture (PTC) refers to a technique of cultivation of plant cells and other parts on artificial nutrient medium in controlled environment under aseptic conditions. PTC requires various nutrients, pH, carbon source, gelling agent, temperature, photoperiod, humidity etc. and most importantly the judicious use of plant growth regulators. Various natural, adenine and phenyl urea derivatives are employed for the induction and proliferation of different types of explants. Several phenyl urea derivatives were evaluated and it was observed that

thidiazuron (n-phenyl-N"-1,2,3- thidiazol-5-ulurea) was found to be the most active among the plant growth regulators. Thidiazuron (TDZ) was initially developed as a cotton defoliant and showed high cytokinin like activity. In some examples, its activity was 100 times more than BA in tobacco callus assay and produces more number of shoots in cultures than Zeatin and 2iP. TDZ also showed major breakthrough in tissue culture of various recalcitrant legumes and woody species. For the last two decades, number of laboratories has been working on TDZ with different aspect and number of publications has come out. To the best of our knowledge, there is no comprehensive edited volume on this particular topic. Hence the edited volume is a deed to consolidate the scattered information on role of TDZ in plant tissue culture and genetic manipulations that would hopefully prove informative to various researches. Thidiazuron: From Urea Derivative to Plant Growth Regulator compiles various aspects of TDZ in Plant Tissue Culture with profitable implications. The book will provides basic material for academicians and researchers who want to initiate work in this fascinating area of research. The book will contain 26 chapters compiled by International dignitaries and thus giving a holistic view to the edited volume.

**Plants and BioEnergy** Maureen C. McCann,Marcos S. Buckeridge,Nicholas C. Carpita,2013-11-23 A country's vision for developing renewable and sustainable energy resources is typically propelled by three important drivers – security, cost, and environmental impact. The U.S. currently accounts for a quarter of the world's total oil consumption, with domestic demands necessitating – at an ever growing cost – a net import of more than 50% of the oil used in this country. At the same time, Brazil, because of its forward thinking on energy strategy, is today energy independent. As emerging economies around the world increase their petroleum use by large margins and as large fractions of that new consumption are necessarily supplied from unstable parts of the world, the inevitable repercussions on petroleum-driven economies will continue to escalate. In addition, there is an unequivocal imperative to take immediate and aggressive measures to reduce net greenhouse gas emissions by decreasing fossil fuel consumption and increasing our use of carbon-neutral or carbon-negative fuels as well as improving efficiency of fuel use. Economic growth and development worldwide depend increasingly on secure supplies of reliable, affordable, clean energy. Together with its counterpart societies, was convened the First Pan-American Congress on Plants and BioEnergy, which was held in June, 2008, in Mérida, Mexico. Sponsored by the American Society of Plant

Biologists, this congress was designed to initiate Pan-American research collaborations in energy biosciences. At that congress, the organizational committee committed themselves to continue the meeting biennially, resulting in the 2nd Pan-American Congress on Plants and BioEnergy to be held with the endorsement of ASPB, July 6-10, 2010, in São Paulo, Brazil. Whereas the 1st congress covered a broad range of topics that bioenergy impacted, the second congress will focus more on the advances in plant biology: the genetic improvement of energy crop plants, their fit into regional environments, and the development of a sustainable energy agriculture.

**Plant Tissue Culture: Propagation, Conservation and Crop Improvement** Mohammad Anis, Naseem

Ahmad, 2016-10-08 This book presents basic concepts, methodologies and applications of biotechnology for the conservation and propagation of aromatic, medicinal and other economic plants. It caters to the needs and challenges of researchers in plant biology, biotechnology, the medical sciences, pharmaceutical biotechnology and pharmacology areas by providing an accessible and cost-effective practical approach to micro-propagation and conservation strategies for plant species. It also includes illustrations describing a complete documentation of the results and research into particular plant species conducted by the authors over the past 5 years. Plant Biotechnology has been a subject of academic interest for a considerable time. In recent years, it has also become a useful tool in agriculture and medicine, as well as a popular area of biological research. Current economic growth is globally projected in a highly positive manner, but the challenges many countries face with regard to food, feed, malnutrition, infectious diseases, the newly identified life-style diseases, and energy shortages, all of which are worsened by an ever-deteriorating environment, continue to pull the growth digits back. The common thread that connects all of the above challenges is biotechnology, which could provide many answers. Molecular biology and biotechnology have now become an integral part of tissue culture research. The tremendous impact generated by genetic engineering and consequently of transgenics now allows us to manipulate plant genomes at will. There has indeed been a rapid development in this area with major successes in both developed and developing countries. The book introduces several new and exciting areas to researchers who are unfamiliar with plant biotechnology and also serves as a review of ongoing research and future directions for scholars. The book highlights numerous methods for in vitro propagation and utilization of techniques in raising transgenics to help readers reproduce the experiments discussed.

Opportunities for Agroforestry in the Temperate Zone Worldwide , 1994

Agroforestry for biodiversity and ecosystem services Donald Mlambo, Yashmita Ulman, Pedro Álvarez-Álvarez, Sangram Bhanudas Chavan, 2025-06-18 Agroforestry (farming systems with trees) has been practised for millennia across the world, but its significance as a relevant part of land use has not been formally recognized. As global food demand continues to increase, farmers are increasingly relying on intensive use of existing croplands and land clearing, resulting in environmental

degradation. This degradation includes the loss of biodiversity and vital ecosystem services that support human well-being. However, recent discourses suggest that unlocking the potential of agroforestry could offer a solution to this pressing challenge. By harnessing agroforestry, we have the opportunity to support biodiversity in agricultural landscapes, improve agricultural productivity and livelihoods, and provide numerous ecosystem services such as nutrient retention, erosion control, carbon sequestration, pollination, pest control and fire risk reduction. Agroforestry encompasses a wide spectrum of practices including natural vegetation remnants, Taungya, hedgerows, windbreaks, home gardens, forest farming, riparian buffers, fallow areas, silvopasture and alley cropping. By exploring these diverse agroforestry systems worldwide, we can better understand the comprehensive range of ecosystem services they offer. One of the greatest challenges faced by humanity in the Anthropocene is to reconcile biodiversity conservation with the demands of economic development, which often involves converting forestland to other land uses. Globally, forest conversion and unsustainable management practices in agricultural landscapes are driving the loss of biodiversity and ecosystem services. Recent research has advanced our understanding of the potential of agroforestry as a solution to environmental degradation, highlighting the need to unlock its potential to achieve both local and global sustainable development goals. However, scientific evidence on the impacts of agroforestry on biodiversity and ecosystem services is not yet universally available. To upscale agroforestry practices, it is crucial to gather field-based evidence that demonstrates the benefits of biodiversity conservation through agroforestry. This evidence will support informed decision-making by farmers, advisory services, and policy-making bodies. Therefore, this issue aims to present information and evidence from various regions of the world, shedding light on the diverse services provided by agroforestry and how these systems are being utilized in the current era of climate change and sustainable development.
