**java - how to Call super constructor in Lombok - Stack Overflow** Apr 20, 2015 · how to Call super constructor in Lombok Asked 10 years, 4 months ago Modified 1 year, 1 month ago Viewed 339k times [coding style - Using "super" in C++ - Stack Overflow](#) As for chaining super::super, as I mentionned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java (where you can't chain "super"). [Python: 'super' object has no attribute 'attribute\\_name'](#) After the base class's `__init__` ran, the derived object has the attributes set there (e.g. `some_var`) as it's the very same object as the self in the derived class' `__init__`. You can and should just use `self.some_var` everywhere. `super` is for accessing stuff from base classes, but instance variables are (as the name says) part of an instance, not part of that instance's class. **super () in Java - Stack Overflow** Sep 22, 2010 · `super()` is a special use of the `super` keyword where you call a parameterless parent constructor. In general, the `super` keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. [oop - What does 'super' do in Python? - Stack Overflow](#) Nov 3, 2015 · The one without `super` hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with `super` has greater flexibility. The call chain for the methods can be ... [python - replace block within { { super \(\) } } - Stack Overflow](#) In the child template, I would like to include everything that was in the head block from the base (by calling `{{ super() }}`) and include some additional things, yet at the same time replace the title block within the `super` call. **What is a difference between <? super E> and <? extends E>?** Sep 2, 2009 · The first (<? `super E`>) says that it's "some type which is an ancestor (superclass) of `E`"; the second (<? `extends E`>) says that it's "some type which is a subclass of `E`". (In both cases `E` itself is okay.) So the constructor uses the ? `extends E` form so it guarantees that when it fetches values from the collection, they will all be `E` or some subclass (i.e. it's compatible). The ... **'super' object has no attribute '\_\_sklearn\_tags\_\_'** Dec 18, 2024 · 'super' object has no attribute '\_\_sklearn\_tags\_\_'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues between Scikit-learn and XGBoost or Python version. I am using Python 3.12, and both Scikit-learn and XGBoost are installed with their latest versions. [Understanding Python super\(\) with \\_\\_init\\_\\_\(\) methods](#) Feb 23, 2009 · `Super` simply guarantees we call the correct next class's method in the method resolution order, whereas the other way hard-codes the next method to be called, which makes cooperative multiple inheritance more difficult. **How does**

**Python's super () work with multiple inheritance?** In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead.
